

1 Answer :

Cyberlaw is the area of law that deals with the Internet's relationship to technological and electronic elements, including computers, software, hardware and information systems. Cyberlaw is also known as Cyber Law or Internet Law.

Cyber law is formed to maintain discipline and justice in the cyber world. This area in the legal system is introduced because the crime related to computers and other technology was increasing rapidly. These types of crimes were not falling under the category of any existing legal category therefore a separate section was formed named Cyber Law.

2 Answer :

Cyberlaw is important for following reasons:

- Cyber law provides legal protections to people using the internet including both businesses and regular citizens.
- Cyber laws decide different forms of punishment depending on the type of law you broke, who you offended, where you violated the law, and where you live.
- It also assists to keep people in right track when they are trying to harm people using technologies
- It protects personal information of the user .
- It also offers the right on digital world .
- It assists user to maintain security in digital world.

3 Answer :

Cyberlaw is needed in Nepal because of the following reasons:

1. Protection
2. control-action
3. Legal-right

1. Protection:

Protection is the basic requirement or need to have cyberlaw in any state or country. Beyond the physical world protection is also required for digital world. In the digital world, everything is open. Anyone can access it easily without any protection. However, most people spend their time on internet to make digital world smarter. In digital world one person can harm another person using technologies. Similarly, important information can be stolen by staying at the any corner of the world. Thus, protection can be introduced after cyber law introduced in Nepal.

2. Control action:

The government of any country has responsibility of take control action in order to reduce crime and have welfare of the people. Similarly, in case of cyber space, control action is required in order to control maintain cyber law in the country or in digital world. For example, Google who is one of the leading companies in the world has responsibility of working for those system who literally goes against the cyber law. Cyber law contains control action in order to take control on each of the action done by user in digital world.

3. Legal right:

In digital world, many people develop or explore new thing. While in case of digital world, if any people do mistake in digital world, he/she works against cyber law. For example, hacking, cracking, phishing, email bombs etc. are cyber-crime which happened in digital world and work against in digital world. The victim must have excellent judgment and guilty must punished. It can be only done after introducing cyber law in Nepal.
